

Pro-Stride Advanced Joint Therapy - Emily Lundstrom, RVT, Rider / Owner

October 2016

At the end of 2015, my 4 year old Appaloosa horse, Elliott, injured his right fetlock joint and the adjoining tendon sheath while in his stall. After 3 months of various treatments (stall rest, joint injections, shockwave, etc), Elliott's injuries and lameness persisted. Competing with him in the upcoming 2016 show season appeared unlikely. My veterinarian introduced me to Pro-Stride Advanced Joint Therapy as a treatment option for Elliott, describing it as a "super solution of platelets, healing proteins, and anti-inflammatory proteins" coming from the horses own blood.

The decision to inject Elliott's joint and tendon sheath with Pro-Stride was quickly decided and the results were remarkable. In only 3 days he was walking sound, and at 1 weeks he was being conditioned under saddle. Elliott's turnaround allowed for competing in a rigorous 2016 show season, culminating at the 2016 Appaloosa World Show in Texas.

Elliott's accomplishments at the 2016 Appaloosa World Show included a Reserve World Championship and several Top 10s!

None of that would have been possible without the healing help of Pro-Stride!
